Art Unit: 2853

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5, 6 are rejected under 35.U.S.C. 103(a) as being unpatentable over Ishikawa et al (U.S. Pat. 6,364,446) in view of Otsuka (U.S. Pat. 6,497,468).

Ishikawa et al discloses:

- regarding claim 1 and claim 5, ink jet printing apparatus having a carriage scanning means for moving and scanning a carriage which a print head that ejects ink is mounted (Column 6, Lines 53 67), print medium feeding means for feeding one of a plurality of stacked print media, and print medium conveying means for conveying the print medium fed by the pint medium feeding means to a position where printing can be carried out using the print head (Figure 10; Column 14, Lines 12 15)
- control means (Figure 11) for causing performance of a print medium feeding and conveying operation of continuously conveying said print medium while shifting said print medium from said print medium feeding means (1009 of Figure 11) to said print medium conveying means (Column 7, Lines 43 57; Column 14, Lines 11 15) and a preliminary ejecting operation (Column 22, Lines 49 58)

Application/Control Number: 10/766,989

Art Unit: 2853

- control means providing control such that not all of driving of said print medium feeding means, driving of said print medium conveying means, and said preliminary ejecting operation are simultaneously performed (Column 13, Lines 45 – 62)

Page 3

- **regarding claim 6,** the control means providing control such that the preliminary ejecting operation is started after the driving of the print medium feeding means has completed (Column 22, Lines 55 – 58)

Ishikawa et al does not disclose expressly the following:

- regarding claim 1 and claim 5, print medium feeding means to the print medium conveying means and causing in parallel performance of a preliminary ejection operation during a part of the period of the performance of the print medium feeding and conveying operation

Otsuka discloses:

- **regarding claim 1 and claim 5,** print medium feeding means to the print medium conveying means and causing in parallel performance of a preliminary ejection operation during a part of the period of the performance of the print medium feeding and conveying operation (Column 4, Lines 26 – 35), for the purpose of optimizing distribution of electric power for a plurality of driving sources of the printing apparatus.

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of print medium feeding means to the print medium conveying means and causing in parallel performance of a preliminary ejection operation during a part of the period of the performance of the print medium feeding and conveying operation as taught by Otsuka into the device of Ishikawa et al.

Art Unit: 2853

The motivation for doing so would have been to optimize the distribution of electric power for a plurality of driving sources of the printing apparatus.

Claims 2, 3, 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishikawa et al (U.S. Pat. 6,364,446) as modified by Otsuka (U.S. Pat. 6,497,468) as applied to claim 1 above, and further in view of Rasmussen et al (U.S. Pat. 4,872,026).

Ishikawa et al as modified by Otsuka discloses the following:

- regarding claim 4, wherein ink jet printing apparatus has a first driving source that electrically drives said carriage scanning means (1710 of Figure 2), a second driving source that electrically drives said print medium feeding means (1009 of Figure 11), and not all of said driving sources are simultaneously driven (Column 13, Lines 57 – 62)

Ishikawa et al as modified by Otsuka does not disclose expressly:

- regarding claim 2, wherein preliminary ejecting operation is performed concurrently with said operation performed by said print medium conveying means to convey said print medium the position where printing can be carried out using said print head, said conveying operation being included in said print medium feeding and conveying operation
- regarding claim 3, wherein said preliminary ejecting operation includes a step of allowing said carriage scanning means to move said carriage to a position where said print head can carry out preliminary ejection, a step of allowing said print head to carry out preliminary ejection, and a step of allowing said carriage scanning means to

Application/Control Number: 10/766,989 Page 5

Art Unit: 2853

move said carriage to a position where sad print head can execute printing on said print medium

- **regarding claim 4,** wherein ink jet printing apparatus has a third driving source that electrically drives said print medium conveying means

Rasmussen et al discloses:

- **regarding claim 2,** wherein preliminary ejecting operation is performed concurrently with said operation performed by said print medium conveying means to convey said print medium the position where printing can be carried out using said print head (Column 3, Lines 33 35), said conveying operation being included in said print medium feeding and conveying operation (Column 20, Lines 4 6). For the purpose of ensuring that all nozzles of the print head are firing properly.
- regarding claim 3, wherein said preliminary ejecting operation includes a step of allowing said carriage scanning means to move said carriage to a position where said print head can carry out preliminary ejection, a step of allowing said print head to carry out preliminary ejection (Column 19, Lines 63 68; Column 20, Lines 1 6), and a step of allowing said carriage scanning means to move said carriage to a position where sad print head can execute printing on said print medium (Column 3, Lines 36 40). For the purpose of clearing any nozzle clogs that might develop before printing begins.
- **regarding claim 4,** wherein ink jet printing apparatus has a third driving source that electrically drives said print medium conveying means (Column 1, Lines 29

Application/Control Number: 10/766,989

Art Unit: 2853

- 40). For the purpose of conveying a sheet of the medium form the paper supply to the collection means through a printing zone.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of regarding claim 2, wherein preliminary ejecting operation is performed concurrently with said operation performed by said print medium conveying means to convey said print medium the position where printing can be carried out using said print head, said conveying operation being included in said print medium feeding and conveying operation; regarding claim 3, wherein said preliminary ejecting operation includes a step of allowing said carriage scanning means to move said carriage to a position where said print head can carry out preliminary ejection, a step of allowing said print head to carry out preliminary ejection, and a step of allowing said carriage scanning means to move said carriage to a position where sad print head can execute printing on said print medium; regarding claim 4, wherein ink jet printing apparatus has a third driving source that electrically drives said print medium conveying means; as taught by Rasmussen et al into the device of Ishikawa et al as modified by Otsuka. The motivation for doing so would have been to improve the quality of printing.

Response to Arguments

Applicant's arguments with respect to claims 1 - 6 have been considered but are moot in view of the new ground(s) of rejection. Please see the above rejections regarding Ishikawa et al (U.S. Pat. 6,364,446) in view of Otsuka (U.S. Pat. 6,497,468)

Art Unit: 2853

and Ishikawa et al as modified by Otsuka and further in view of Rasmussen et al (U.S. Pat. 4,872,026). They disclose a preliminary ejecting operation during a part of the period of the performance of the print medium feeding and conveying operation.

. Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
